

Tackling Tough Targets with a New Wave of Antibody Technologies - BioInternational 2016, Moscone Center, San Francisco, USA

Innovative Targeting Solutions to present at Bio-International 2016 along with some of the industry's most exciting next-generation antibody developers.

Moderator: Paul Kang- Innovative Targeting Solutions Inc.

Speakers: Colin Brenan- HiFiBiO, John Haurum- F-star, Eric Krauland-Adimab

Date/Time: Wednesday June 8th, 2016 3:30pm

Session Abstract:

Next generation antibody therapeutics require new approaches to discovery and new approaches to engineering to address tougher targets and increasingly complex indications. Building upon lessons learned from successes and failures of earlier generations, the next wave of antibody therapeutics strive to tackle a broad range of challenging targets and deliver longer lasting effects for a wider patient population often in combination with other drugs.

This session will discuss the newest antibody technologies including strategies for single-cell deep mining of immune repertoires, bispecific antibody platforms, novel mammalian antibody engineering and immune-therapy approaches. The veteran panel of experts will discuss the expectations and challenges of the latest technologies and share insights on how to achieve the next big breakthrough in antibody development.
